# About The Planning Survey 24

More information:  
[barc.com/reviews](https://barc.com/reviews)

## The Planning Survey 24

The Planning Survey 24 is based on the world's largest survey of planning software users conducted from November 2023 to February 2024, with 1,272 respondents and analysis of 21 products. It evaluates user feedback on 33 criteria (KPIs), such as *Business Benefits*, *Project Success* and *Customer Satisfaction*.

This summary highlights key findings for Valsight, emphasizing positive results without displaying all KPI outcomes.

## The KPIs

The Planning Survey 24 provides the reader with well-designed KPI dashboards packed with concise information, which can be absorbed at a glance. The KPIs all follow these simple rules:

1. Only measures that have a clear good/bad trend are used as the basis for KPIs.
2. KPIs may be based on one or more measures from The Planning Survey.
3. Only products with samples of at least 15 - 30 (depending on the KPI) for each of the questions that feed into the KPI are included.
4. For quantitative data, KPIs are converted to a scale of 1 to 10 (worst to best).

5. A linear min-max transformation is applied, which preserves the order of, and the relative distance between, products' scores.

The terms 'top-ranked' and 'leader' are used in the chart titles. 'Top-ranked' indicates first position. 'Leader' usually denotes a position in the top 22-33% or (in peer groups of five vendors) the top 2 products listed in the chart.

## Peer Group Classification

The Planning Survey 24 categorizes the different planning, budgeting and forecasting products into peer groups, based on three criteria (specialization, usage scenario and global presence) and defined by BARC analysts' expertise and judgment:

- **Products for Planning, Budgeting and Forecasting:** Designed for planning, budgeting and forecasting, these products cater to various sub-plans, offering flexibility and predefined planning solutions for specific applications. Since The Planning Survey is focused on exactly this use case, this peer group includes all the products featured in the survey.
- **Integrated Products for Planning & Financial Consolidation:** With a strong emphasis on financial performance management, these products provide built-in financial intelligence and predefined business rules for an integrated approach to (financial) planning and financial

consolidation.

- **Integrated Products for Planning and BI & Analytics:** Beyond planning and performance management, these products integrate comprehensive reporting, dashboarding, ad hoc query and analysis capabilities, expanding their scope beyond pure planning functionality.
- **Midsize/Departmental Implementations:** Products in this peer group are typically (but not exclusively) used in small and midsize scenarios and/or departmental implementations with a moderate number of users.
- **Large/Enterprise-Wide Implementations:** Products in this peer group are typically (but not exclusively) used in large scenarios and/or enterprise-wide implementations with many users.
- **Worldwide Implementations:** These vendors have a truly global sales and marketing reach. They are present worldwide, and their products are used all around the world.

Valsight features in the following peer groups:

- Products for Planning, Budgeting & Forecasting
- Midsize/Departmental Implementations

# About Valsight

View full profile:  
[barc.com/reviews](https://barc.com/reviews)

## Valsight overview

Valsight was founded in 2015 as a spin-off of the Hasso Plattner Institute and is headquartered in Berlin with 40 employees. As a German software-as-a-service (SaaS) company, Valsight enables enterprises to maximize their financial performance. The vendor envisions faster and better support for management decisions by creating data-driven insights. Specifically, Valsight provides companies with functionality to flexibly simulate financial plans, forecasts or any scenario on the fly.

Valsight supports value-driver-based planning, forecasting and simulations and the interactive analysis of results. Driver models describe the essential business contexts of a business model and are the basis for flexible, transparent simulations of effects. The creation of driver models can be done by business users in a graphical, no-code, drag-and-drop user interface. To model more complex cause-and-effect relationships, an integrated formula language is also available. Typical use cases implemented at customers include strategic

planning / multi-year planning, target setting, financial forecasting, simulation of investment cases, tariff simulation and M&A simulation.

With Valsight, finance and controlling teams can simulate, analyze and present scenarios flexibly, transparently and quickly. Leveraging the scenario manager, users can directly enter new insights, either derived from a company's business environment or regarding the development of certain drivers, and then immediately include them in the respective scenario. Driver-based forecasts can be created using automated updates of actual values and may include statistical functions (e.g., LOOKUP, ARIMA). To adjust forecast values, driver-based actions can be entered. With the option to quickly and flexibly create new scenarios, a larger spectrum of values can be calculated and analyzed for each KPI.

Planning and simulation results can be analyzed ad hoc and interactively via multiple diagrams, dashboards and an integrated presentation mode. Integrated collaboration features and

commenting capabilities support data-related discussion of results. Workflow functionality is available as standard to control planning, forecasting and simulation processes. Programming skills are not required to set up and run Valsight, so integration into the existing infrastructure can therefore be completed in a relatively short timeframe. Automatic transfer and simple structuring of basic data via various integration options and interfaces from other systems are provided.

In addition, Valsight offers consulting support to set up and manage the driver models and simulations as part of the license agreement. Users can opt for a paid pilot phase to experience the benefits of the simulation software.

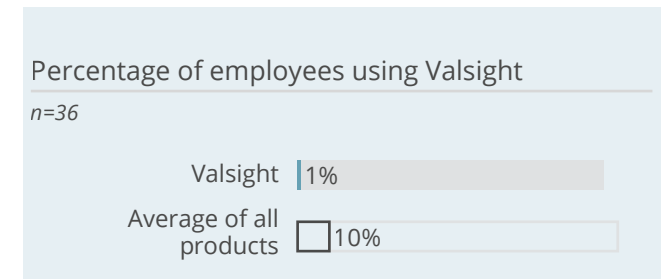

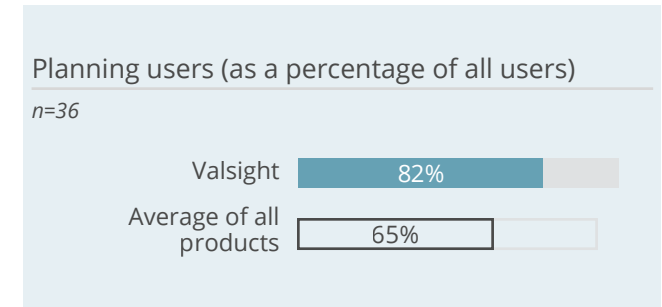

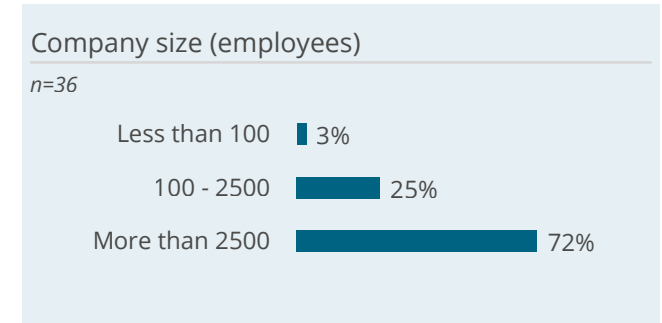

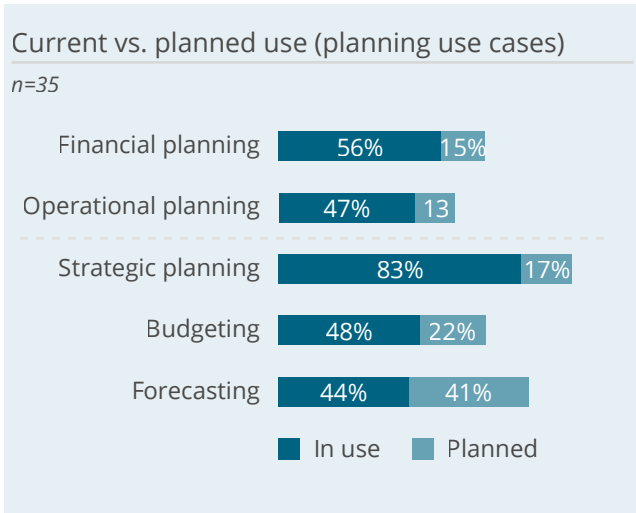

The software is fully web-based and available in the cloud leveraging providers such as Hetzner and Open Telekom Cloud, but also Amazon Web Services, Microsoft Azure and SAP HANA Enterprise Cloud upon request. Data storage is relational in PostgreSQL, Microsoft SQL Server or SAP HANA. Data integration and modeling takes place within the Valsight application.

# User and Use Case Demographics

This year, we had **36 responses** from Valsight users. At the time of the survey, 19 percent of them were using version 5.8, 4 percent version 5.9, 74 percent version 6 and 4 percent version 6.1

# Project Success

This KPI is based on the level of satisfaction with implementations and the frequency of projects completed on time and on budget.

## BARC Comment

With 24 top ranks and 17 leading positions, Valsight achieves an excellent set of results in this year's Planning Survey. Excellent ratings in KPIs such as *Project Success*, *Vendor Support*, *Customer Satisfaction*, *Simulation* and *Driver-Based Planning* underline Valsight's solid position in the planning software market, mainly in the DACH region. Companies can benefit from using Valsight in terms of increased transparency and traceability of planning, improved integration of strategic and operational planning and improved software user satisfaction. All the Valsight users surveyed said they would "definitely" or "probably" recommend their planning product to other organizations – an outstanding result and a great indicator of customer satisfaction with the vendor and its product.

## BARC

BARC is one of Europe's leading analyst firms for business software, focusing on the areas of data, business intelligence (BI) and analytics. The company was founded in 1999 as a spin-off of the chair of Business Administration and Information Systems at the University of Würzburg, Germany. Today, BARC combines empirical and theoretical research, technical expertise and practical experience, and a constant exchange with all market participants to provide market-leading research publications, events and advisory.

### Research

BARC user surveys, software tests and analyst assessments in blogs and research notes give you

the confidence to make the right decisions. Our independent research gets to the heart of market developments, evaluates software and providers thoroughly and gives you valuable ideas on how to turn data, analytics and AI into added value and successfully transform your business.

### Consulting

The BARC Advisory practice is entirely focused on translating your company's requirements into future-proof decisions. The holistic advice we provide will help you successfully implement your data & analytics strategy and culture as well as your architecture and technology. Our goal is not to stay for the long haul. BARC's research and

experience-founded expert input sets organizations on the road to the successful use of data & analytics, from strategy to optimized data-driven business processes.

### Events

Leading minds and companies come together at our events. BARC conferences, seminars, round-table meetups and online webinars provide more than 10,000 participants each year with information, inspiration and interactivity. By exchanging ideas with peers and learning about trends and market developments, you gain new impetus for your business.
